

Can nature-based solutions make us healthier?

Large scale interdisciplinary alliance on nature-based solutions and health: indicators, inequality and innovation

ABOUT

LILY is an open network of scientists and stakeholders exploring linkages between NbS and Health through:

- + a conceptual NbS-Health framework
- + best-practice guidelines for spatio-temporal NbS-Health indicators considering vulnerability and inequality
- + recommendations on novel data streams & methodology for indicator-based monitoring and evaluation
- + a network and data platform for information sharing

ACTIVITIES

LILY focuses on research coordination and capacity building:

- + guided workshops and co-production
- + training seminars for scientists and summer schools
- + knowledge exchange trips and virtual mobility
- + international conferences
- + stakeholder engagement and webinars

Evidence-based design of NbS to maximise benefits, minimise harms, and prevent the widening of health inequalities

NbS are instrumental in European climate change mitigation and adaptation strategies. However, through creating ecosystems, NbS can have positive and negative impacts on the health of people, animals and the environment: **co-benefits** and **unintended consequences**.

4 WORKING GROUPS

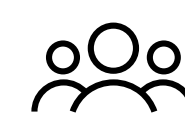

SYNTHESISE

WG1 • Synthesis of NbS-Health gaps, framework, methodology, data sources, and best practices

CONNECT

WG3 • NbS-Health Network and Data Platform

ENGAGE

WG2 • NbS-Health capacity building and stakeholder engagement

SHARE

WG4 • Communication and Dissemination

ACTION DETAILS

COST Action CA23133

Start: January 2025

End: December 2028
